Potential area for SUDS/drainage for the BESS and substations - subject to detail design.

If required, shade netting will be installed in places in early years until landscape planting becomes established.

**KEY**

-  Existing trees and hedgerows in and around the site
-  Existing trees and hedgerows to be removed for proposed development
-  Existing stone wall to be retained
-  Potential green infrastructure could consist of native scrub and trees which ties in with the existing landscape framework which is located within and adjacent to the site. Landscape buffers to consist a minimum of 10m wherever possible to provide a level of screening to the development, whilst tying into the wider character of the landscape, which includes irregularly shaped woodland blocks
-  Potential areas for habitat creation which could consist of species-rich grassland, woodland and wetland habitats

-  Long duration battery energy storage
-  Short duration battery energy storage
-  Borrow pit
-  Proposed Development substation
-  Temporary construction compound
-  SPEN substation
-  SPEN temporary construction compound
